# Induction Cooktop, 90cm, 5 Zones

Series 7 | Contemporary

Black Glass

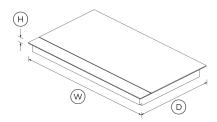

Ultimate flexibility. A stand-out choice, with a large cook surface with five cooking zones including a dual zone.

- Child and pet safe cooktop remains cool to touch until a pot or pan is placed on the surface
- PowerBoost activates a very high heat, bringing liquid to boil in less than a minute
- Touch&Slide controls easily control each cook zone

# **DIMENSIONS**

# **FEATURES & BENEFITS**

#### **Instant Response**

Go from a boil to a simmer in seconds. Fisher & Paykel Touch&Slide controls react immediately when you adjust the temperature so you don't waste time in the kitchen.

#### Safer Choice

Induction cooktops only start heating your pot or pan once you've placed it on the ceramic surface and stop as soon as you remove it – so you don't have to worry about curious little fingers or leaving an element on.

#### Easy Cleaning

The surface around your cookware stays cool when you cook, preventing baked-on spills and making cleaning up a breeze. The durable ceramic cooktop surface just needs a quick wipe after use to maintain its good looks.

#### **Enhanced Features**

PowerBoost and GentleHeat deliver either very high or very low heat fast for specialised cooking tasks such as searing meat and melting chocolate. An integrated timer keeps you on track.

#### Superior Efficiency

No heat is wasted during induction cooking because only the cookware is heated, not the cooktop surface. This makes induction cooktops more energy-efficient than electric or gas cooktops.

#### Precise Control

Fisher & Paykel induction cooktops offer extremely accurate, consistent temperature control from very high to very low heats, so you can sear, sauté and temper like a pro.

#### **SPECIFICATIONS**

### Accessories (sold separately)

Joiner kit 534731 (Optional)

#### Cleaning

Flat easy clean glass surface

# Consumption

## Where applicable:

All appliances use energy, and energy usage typically generates carbon emissions. Fisher & Paykel Appliances' In-use Energy Carbon Emissions Estimate indicates carbon emissions from a product's in-use energy. This is calculated either annually or per cycle, using the product's market-specific energy label energy consumption data multiplied by the carbon emissions factor for energy in your country or region.

Our In-use Energy Carbon Emissions Estimate is designed to assist customers in making informed purchasing decisions when comparing different Fisher & Paykel products. For example, a heat pump dryer typically has a lower In-use Energy Carbon Emissions Estimate than a vented dryer.
