FEATURES & BENEFITS

From Steam To Sous Vide

Fine amounts of steam are released with accuracy and precision at a range of temperatures to ensure food is cooked gently and evenly. Perfect for entertaining, you can sous vide proteins such as steak and salmon before guests arrive, and simply sear when ready to serve. The flexibility of timing and accuracy of temperature control helps to ensure perfect, predictable results every time.

Gentle And Healthy

Steam functions allow you to cook food in its own juices to retain nutrients, moisture and flavor. With five steam-only cooking functions including Sous Vide, plus four combi-steam functions, this oven lets you enjoy the benefits of flavorful and healthy restaurant-quality meals at home.

Multi-Function Flexibility

A true multi-function oven, where the advantages of steam and convection cooking can be explored in full. You have the freedom to choose – whether it's dry heat, moist heat, or a combination of the two, each cooking method creates a unique result. Purchase our Wireless Temperature Sensor accessory and precisely monitor cooking in real time (accessory sold separately).

Cook With Confidence

Using the large 5" touchscreen interface, you can cook with a favourite method, hero ingredient, cooking function or recipe. Your oven can guide you through the steps, or change the temperature and heat type automatically, depending on your selection.

Reheat And Restore

Reduce household food waste by reheating foods with steam, which helps to regenerate moisture levels and ensure meals come out fresh and delicious. Use Steam Regenerate to reheat leftover meals such as roasts and risotto, while Crisp Regenerate is perfect for refreshing pastries, bread and pizza.

Complementary Design

Designed to blend seamlessly into the kitchen, this Minimal style oven features subtle textural and tonal contrasts.

Available in a black or grey finish to support a considered kitchen design. Pair with a Vacuum Seal Drawer for the ultimate kitchen solution.

Exceptional Convection Performance

AeroTech™ circulates heat evenly for a consistent temperature throughout the cavity, while ActiveVent technology ensures optimized moisture levels when using convection functions. Achieve perfect results even when you're using multiple shelves.

Where applicable:

All appliances use energy, and energy usage typically generates carbon emissions. Fisher & Paykel Appliances' In-use Energy Carbon Emissions Estimate indicates carbon emissions from a product's in-use energy. This is calculated either annually or per cycle, using the product's market-specific energy label energy consumption data multiplied by the carbon emissions factor for energy in your country or region.

Our In-use Energy Carbon Emissions Estimate is designed to assist customers in making informed purchasing decisions when comparing different Fisher & Paykel products. For example, a heat pump dryer typically has a lower In-use Energy Carbon Emissions Estimate than a vented dryer.
